“What separates Microsol Resources from other software providers is an **understanding** of and a **passion** for the client’s **work**. This extra step makes all the difference. More than just software, we provide our enthusiastic **support and expertise** to the architectural and engineering communities.”

– Emilio Krausz, President and Founder
Microsol Resources Corporation

When you buy Autodesk software, you want more than just a box—you want a complete solution. Microsol Resources has been providing Autodesk software and services to the architectural and engineering communities for over 20 years. Our team of Application Specialists is deeply committed to delivering the services you need, when you need them. From Telephone and On-site Support, to Training, Implementation, CAD Standards Development and CAD Management, our services are designed to address your specific needs. More than just software, what we offer is a promise that, as much as you need us, we will be there. It is this dedication that has earned Microsol Resources more than 2,000 architecture and engineering clients in New York, Pennsylvania, New Jersey and Connecticut.

Telephone Support

There is nothing worse than calling someone for support only to be put through a lengthy telephone tree and wind up with a helpdesk technician who can’t answer your questions. When you call Microsol Resources you speak to the same high-level Application Specialists who provide our Training and Implementation services. In short, we connect you directly to a professional who can meet you on your level.

On-site Support

When telephone support isn’t enough Microsol Resources can send an Application Specialist to your office. Whether it is a planned visit, or an emergency situation, our On-site Support service can be a vital resource to keep your systems up and running in a timely manner.

CAD Standards Development

Developing CAD standards is like tailoring. Just as each individual must be measured to arrive at a perfect fit, each office has to adapt its software to their unique and evolving processes. Our Application Specialists will work with your team to arrive at and implement a customized set of standards, ensuring that the software you use is a solution fit for your office.

CAD Management

If your firm does not have a full-time CAD Manager, Microsol Resources’ staff can be your de facto part-time CAD Manager. We provide you with an on-site specialist to ensure that your CAD standards will be implemented and maintained. This service may be retained short-, medium- or long-term, as you need it. In that spirit, if you so desire, our Application Specialist can also train one or more of your employees. Microsol Resources’ vast experience with Autodesk software can be invaluable in keeping your systems in top form.

Classroom Training Services

Microsol Resources offers training courses for all of the software products we sell, focused on bringing your staff up to speed with the latest technologies. Our instructors are seasoned professionals who bring their field expertise to the classroom to provide a superior training experience. Microsol Resources’ state-of-the-art training facilities are centrally located — in New York near Penn Station and in Philadelphia at One Penn Center above Suburban Station.

Customized Training

In some situations personalized training is more appropriate and effective than classroom courses. If you want to know your software better, or if you want individualized attention to your questions, Microsol Resources can schedule one or more sessions with one of our Application Specialists, either at one of our facilities or at your office.

Mobile Training Lab

If your firm needs on-site training for a group of users, Microsol Resources is ready to assist. Our Mobile Training Lab is outfitted to send an Application Specialist to you along with the hardware and software they’ll need to teach the same hands-on, comprehensive classes we conduct at our facilities.

Implementation

Over the last few years there have been significant advancements in the software tools available to the architectural and engineering communities. In order to stay competitive in the industry a firm must keep up with the new technologies and implement them successfully. Making the switch from traditional CAD to more advanced software such as Revit and Civil 3D, requires more than just training, it requires an on-site specialist working with your staff to adapt these programs to your processes. Microsol Resources can help you make this change. Our Application Specialists will keep you on the cutting edge of advancements in technology.

Technical Seminars

Microsol Resources offers focused topical seminars that are designed to keep your staff current with subjects such as software updates or the special features of your software. These seminars will enrich your staff’s knowledge and keep your firm at top performance. Available on-site or at our training facilities, these Technical Seminars have consistently been rated by our customers as an invaluable tool!

Microsol Resources is more than just a software reseller. Think of us as your software partner. Our goal is to provide you with the highest level of services and support. This is more than just a business to us — this is our passion. Get the most out of your software — call Microsol Resources today.
